

PHILIPS

Efficia CM Series

Monitor with Assurance & Value

Efficia CM Series

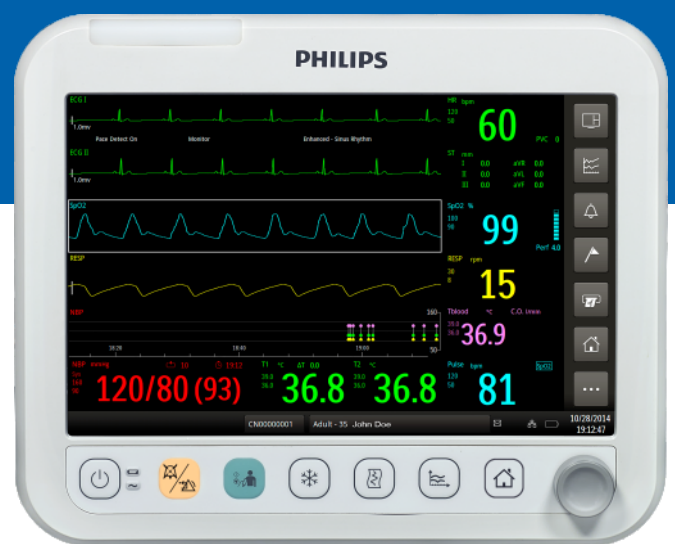

PHILIPS

When both budget and quality matter, the answer is **Philips Efficia** patient monitoring. We offer range of patient monitors, in tune with your needs.

Time-tested physiological measurement algorithms and essential functionality are now within your reach. With your workflow in mind, Efficia monitors are designed to be both portable and easy to use. You can find and use most functions quickly.

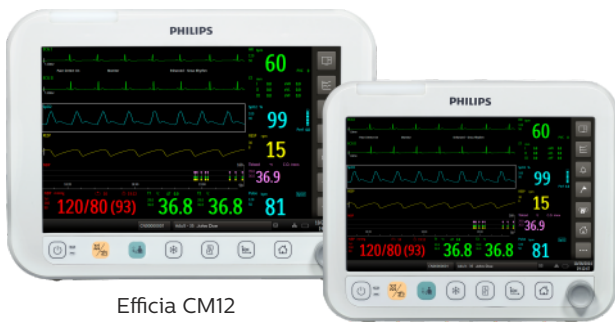

With Efficia patient monitors, you can be confident you're delivering efficient, quality care - all while staying within your budget. It's the best of both worlds: the functionality and innovation you expect of Philips, and the value you need.

- A range of screen sizes 10"/12" and a choice of configurations for different patient types and levels of acuity
- Easy-to-use interface

When budget and quality matter, the choice is Philips Efficia

- Choice of physiological measurements*. Selection is possible for dual Invasive Pressure, Capnography (Mainstream or Microstream) and Cardiac Output (for CM12 only)
- Ready for plug-and-play connectivity to Philips Efficia Central Monitoring**
- 48 hours of full disclosure data on board (optional); retrospective reviews for enhanced decision making
- Built-in HL7 connectivity to interface with hospital information systems

- Solidly built and reliable; able to handle heavy workloads, physical knocks, and electrostatic interference
- Designed to be light and portable for flexible deployment
- Optional changeable batteries, for continued monitoring during transport or to seamlessly cope with power supply fluctuations

- Reliable Philips Efficia consumables, available in cost-effective bundles, or through a delivery service that helps simplify your ordering logistics
- Common supplies across all Efficia products, to make transfers simple
- Time-tested physiological measurements relied on for over 200 million patients every year

*Masimo SET® and Masimo rainbow® measurement parameter options are also available
**Please check availability with your Philips sales representative

Containing your costs, not your capabilities

You may be feeling the constant pressure of meeting clinical demands on a tight budget or the pressures of the current economic climate. Either way, you cannot compromise the quality of your patient monitoring and the information you need for patient management decisions.

Now there's no need for a trade-off. Efficia patient monitors use the same Philips physiological measurements that already help monitor over 200 million patients every year. You'll get the same quality of performance you may already know from our existing line of monitors.

Efficia patient monitors focus on core monitoring functionality. This means you can access the features you need, at a purchase price and total cost of ownership you can justify.

Helping staff help patients

The real return on your investment in patient monitoring is in the quality of your patient care. And that means you need monitoring that helps you deliver that care. Fifty years of experience in patient monitoring has allowed us to develop a close understanding of clinical workflows and staff needs. With these insights, we've designed Efficia patient monitors so you can provide fast and efficient patient care.

Our Efficia user interface helps you get up and running quickly. Even clinicians with minimal experience are ready to use monitors after the "quick start" session we include. Keeping training time and effort low is especially important in areas with temporary staff or high turnover. And when you're comfortable and confident using equipment, you can spend more time caring for patients.

Supporting your budget and meeting your needs

We understand how important ongoing costs are to your overall return on investment. From the outset, we design and create products with a long useful life.

- **Work with us to define your needs** and access various financing alternatives
- **Stay confident with warranties** that help you keep low support costs and no unplanned capital costs for breakdowns
- **Get quality local support from Philips Customer Services**, in line with your in-house capabilities and budget
